

5G Network Specialist

THE ROLE

Implements and manages 5G network infrastructures for automotive applications, ensuring high reliability, low latency, and secure connectivity. Supports vehicle-to-everything (V2X) communication and smart manufacturing systems.

THE WORK

Configure and test 5G private networks, manage base stations and antennas, and optimise network performance. Ensure compliance with communication standards. Collaborate with engineering teams for V2X integration and data management.

THE COMPETENCES

Understanding of mobile communication protocols (5G NR, LTE, V2X). Skills in network optimisation, data traffic analysis, and IoT connectivity. Problem-solving and adaptability to evolving telecom technologies.
