

Data Analyst

THE ROLE

Collects, processes, and interprets complex datasets to support decision-making across automotive operations. Transform raw data into actionable insights for process optimisation, quality improvement, and predictive maintenance. Bridges data engineering, statistics, and business analysis, driving digital transformation within the organisation.

THE WORK

Extract and clean large volumes of data from multiple systems, ensuring accuracy and consistency. Perform statistical and trend analyses to identify inefficiencies and optimisation opportunities. Develop dashboards and visual reports for management. Collaborate with engineering and IT teams to implement data-driven process improvements.

THE COMPETENCES

Proficiency in data analytics tools (Python, SQL, Power BI, or Tableau). Knowledge of statistics, data modelling, and visualisation. Skills in problem-solving, communication, and translating technical results into strategic insights. Understanding of digitalisation trends, data governance, and the use of AI and predictive techniques in the automotive industry.
