

CO₂ and Environmental Concept Expert

THE ROLE

Develops strategies to reduce environmental impact and carbon emissions in product design and manufacturing. Works across departments to align engineering and sustainability goals with regulatory frameworks.

THE WORK

Perform life cycle analyses (LCA) and environmental impact assessments. Define CO₂ reduction concepts for vehicles and production. Support eco-design initiatives and sustainability reporting across projects.

THE COMPETENCES

Knowledge of environmental regulations, LCA methodologies, and carbon footprint calculation. Skills in data modelling, cross-departmental collaboration, and reporting. Strategic thinking and communication of complex environmental data.
