

Cybersecurity Manager

THE ROLE

Leads organisational cybersecurity strategy and ensures that product and process security align with regulations. Coordinates teams, resources, and suppliers to maintain compliance with ISO/SAE 21434 and UNECE R155/R156.

THE WORK

Establish cybersecurity management systems, plan audits, and monitor supplier security. Oversee incident response and regulatory compliance across projects. Represent the organisation in external audits and homologation processes

THE COMPETENCES

Expertise in cybersecurity governance, standards, and risk management. Leadership, planning, and communication skills. Understanding of homologation procedures and supplier management. Ability to translate security requirements into actionable policies.
