

Functional Safety Manager

THE ROLE

Leads and coordinates all functional safety activities across projects. Manages compliance with functional safety standards and supervises safety planning, reviews, and audits.

THE WORK

Prepare safety plans, safety cases, and Development Interface Agreements (DIA). Evaluate team competences, ensure independence in confirmation measures, and manage tool qualification. Interface with customers, suppliers, and auditors.

THE COMPETENCES

Comprehensive understanding of ISO 26262/IEC 61508. Leadership, project management, and analytical skills. Ability to evaluate risk, manage documentation, and oversee team development. Communication and decision-making under regulatory frameworks.
